SUMMARY

A highly motivated and detail-oriented student with a strong academic background in computer applications. Eager to leverage my technical skills and knowledge to contribute to a dynamic development team. Excellent problem-solving abilities, strong communication skills, and a quick learner with a passion for continuous growth in the tech industry.

EDUCATION

Bangalore University2023

Bachelor of Commerce

EXPERIENCE

Data Science Training

- Proficient in using data science tools such as Python, R, SQL, and Excel for data analysis and manipulation. Trained in applying machine learning algorithms for predictive modeling and data mining.
- My problem-solving skills and ability to handle complex datasets have been honed through real-world projects. I am familiar with the data science project lifecycle and Agile methodologies, and I am skilled at developing data-driven solutions to solve business challenges.
- My training has equipped me with the necessary skills to make significant contribution in a data science role.

PROJECTS

Exploratory Data Analysis on Restaurants of Bengaluru

- The main objective of this project is to analyze the restaurant market in Bengaluru, understand the factors influencing customer preferences, and identify trends and opportunities in the industry.
- By performing data cleaning, exploratory data analysis (EDA), and visualization techniques, we aim to identify patterns and trends in the data.
- The insights gained can help restaurant owners in making informed decisions about location, cuisine, pricing, and customer engagement strategies.

Diwali Sales Analysis

- The main objective of this project is to analyze the sales data from the Diwali period to understand customer behavior, product performance, and the effectiveness of marketing strategies.
- By performing data cleaning, exploratory data analysis (EDA), and visualization techniques, we aim to identify patterns and trends in the data to make informed decisions.
- These insights will help optimize marketing strategies, plan inventory, and meet customer demands, leading to improved sales and customer satisfaction during the Diwali festival.

COVID-19 Dashboard Visualization

- The aim of this project is to create a dynamic and interactive dashboard to visualize COVID-19 data, including cases, deaths, recoveries, and vaccinations, across various regions.
- It provide an easy-to-use tool for users to understand the current situation of the COVID-19 pandemic in different regions.
- The insights gained from the dashboard can help policymakers, healthcare professionals, and the general public make informed decisions.

SKILLS

Programming Languages and Database - Python, MYSQL

Data Visualization - Tableau, Seaborn, NumPy, Pandas

Web technologies and Tools - HTML,CSS, Google Colab, Jupyter Notebook

LANGUAGE

Kannada, English, Telugu, Hindi
